

Thank you for choosing Springboro Eye Care/Bellbrook Vision Center for your eye exam today!

Due to the nature of insurance, your exam may be coded under **Medical**. This may include, but is not limited to a diabetic eye exam, glaucoma, or cataracts and more.

Generally, a Vision Care Plan covers a dilated fundus examination when the purpose is for screening for eye disease in an asymptomatic patient or a patient without systemic conditions that can have ocular complications. If the doctor determines that a medical exam is justified, we will still be able to use any **Vision benefits on your glasses or contact lens materials**. A routine eye exam does not cover the scope of what is medically required.

Patient undergoes an eye exam, which includes:

- A health, medication, and vision history
- A refraction to determine your best corrected vision and glasses/contact lens prescription
- An examination of the front and back of the eye with dilation where indicated

Based on the results of the exam, the doctor determines if your vision changes are routine or medical in nature. The doctor may order additional testing, refer you to another doctor or specialist, or advise other treatments as needed.

Routine Coding:

Billed to Vision Plan if available: VSP, EyeMed

If the doctor determines your vision changes are caused by normal refractive error (nearsightedness, farsightedness, astigmatism), your exam will be coded as a routine Comprehensive Vision Exam.

Medical Coding:

Billed to Medical Insurance

If the doctor determines your vision changes are caused by a medical condition and/or addresses a medical concern you have raised, your exam will be coded as a medical Comprehensive Eye Exam (i.e. cataract, glaucoma, diabetic retinopathy, macular degeneration, dry eye, flashes/floaters, double vision, etc.)
